Transcript:

motivation communication for motivation purposes just last sunday i went with a i went to a dinner with a friend who talked to me of a problem of how communication ended with him being discouraged there was a talk that this friend of mine had with a personnel a person of a higher position and that friend of mine got discouraged in that conversation when that with that person of authority is in that position And to encourage people, what happened was that the conversation ended with my friend being discouraged. Next, function of communication for emotional expression. Communication helps facilitate our expression of feelings and emotions. How will this work? Through our words, to the words that we say, to the things that we do, to what our body performs, emotions. and feelings can come out. Lastly, communication is also meant for information

dissemination. So much can be relayed, information can be conveyed through communication. Even if you do not converse with others, even with just your own self, you are relaying information. When you read from a source, that is communication. The author of that book, the author of that source, sharing information to you. So even if you do not relate that information to others, you are already sharing information, but just to yourself. And those are the five functions of communication. Before I proceed to the context on intercultural communication, I'd like to bring up once again the four macro skills of communication. Four. There are now five. I think there are even more than five.
